## Resistance of UV induced mutants of *Trichoderma barzianum* to benzimidazole and dicarboximide fungicides

I. S. DE MELO and A. C. DA SILVA

Centro Nacional de Pesquisa de Defesa da Agricoltura CNPDA/EMBRAPA, Caixa Postal 69, 13820 Jaguariuna, SP, Brazil

Conidia of one wild-type isolate (TW5) of Trichoderma barzianum, antagonistic to Verticillium dabliae and Sclerotinia minor, were irradiated

alternation with *Trichoderma*. The latter strategy permitted complete or almost complete control of grey mould and a reduction (up to 50%) of the number of chemical treatments. Thus, the possibility of including *Trichoderma* in integrated control strategies on protected crops looks promising.
