ABSTRACT

Bacillus thuringiensis is a Gram-positive bacterium which produces insecticidal proteins effective to control several medical and agriculture insect pests. These proteins belong to the Cry, Cyt, Vip and Sip families. This work describes the draft genome sequence of *B. thuringiensis* S1785, which contains genes encoding the parasporal crystal cry, like Cry4Aa, Cry4Ba, Cry10Aa, Cry11Aa, Cry60Aa and Cry60Ba and Cyt genes, Mpp60Aa

and Mpp60Ba. The gene Spp1Aa was identified in the S1785 genome. Genes coding for plant growth promotion pathway were identified.

Keywords: ngs, plant promotion growth, cyt toxin, diptera.

RESUMO

Bacillus thuringiensis é uma bactéria Gram-positiva que produz proteínas insecticidas eficazes para controlar várias pragas de insectos médicos e agrícolas. Estas proteínas pertencem às famílias Cry, Cyt, Vip e Sip. Este trabalho descreve o projecto da sequência genómica de *B. thuringiensis* S1785, que contém genes que codificam o grito de cristal parasporal, como Cry4Aa, Cry4Ba, Cry10Aa, Cry11Aa, Cry60Aa e Cry60Ba e genes Cyt, Mpp60Aa e Mpp60Ba. O gene Spp1Aa foi identificado no genoma S1785. Foram identificados os genes que codificam a via de promoção do crescimento das plantas.

Palavras-chave: ngs, crescimento de promoção de plantas, toxina cyt, díptera.

1 INTRODUCTION

Bacillus thuringiensis strains can produce many insecticidal proteins like Cry proteins. The Cry toxins have specific insecticidal activity against many kinds of insects i.e. Coleoptera, Diptera and Lepidoptera, for instance (1). The insecticidal activity of *B. thuringiensis* subsp. continues to grow through the isolation and identification of new strains with a wide variety of target pests (2).

Purified genomic and plasmid DNA's from strain S1785 were extracted by Masterpure Gram-positive DNA purification kit (Epicentre) and QIAGEN Plasmid Maxi Kit (QiAGEN). Afterwards, these DNA's were sequenced at Macrogen, Inc. (Seoul, Korea) using high-throughput HiSeq2000 and GS-FLX Plus platforms getting one lane of 100 bp and 1/8 region plate, respectively. The reads were assembled using SOAP de novo (version 1.05) and produced 218 contigs totaling 6,477,425 bp (Q20 = 99.31%), with a maximum scaffold size of 359,449 bp, an N₅₀ length of 115,122 bp, and 34.22% G+C content and genome coverage depth was approximately 100x. De novo assembly was carried out using the Geneious version (8.0.4) (3). A total of 6,833 coding sequences (4) and 77 tRNA (5) and 8 rRNA operons (6), and 5 ncRNA were predicted. The chromosome was sized in approx. 5,356,319 bp and the plasmids sizes ranged from 585,993 bp to 2,061 bp. The functions of encoding genes were annotated by using the NCBI nr, Swiss-Prot (7), Clusters of Orthologous Groups (COG) (8), KEGG (9), and InterProScan (10) databases.

The custom insecticidal toxin database was constructed with nucleotide and amino acid sequences of *cry*, *vip*, *cyt*, growth promotion, parasporin and bacteriocin genes using

the complete sequences of other *B. thuringiensis* strains deposited in public databases (<http://www.ncbi.nlm.nih.gov/genome/> or <http://www.btnomenclature.info>). The strain S1785 draft genome sequence carries several insecticidal toxin genes showing identities to the *Cry4Aa*, *Cry4Ba*, *Cry10Aa*, *Cry11Aa*, *Cry60Aa* and *Cry60Ba* and *Cyt* genes, *Mpp60Aa* and *Mpp60Ba*. Additionally, were identified the *Cyt* genes, *Cyt1A* and *Cyt2B*. We found the *Spp1Aa* gene in the genome of the S1785 genome. The genes which encode the metabolic pathway of plant growth promotion 1-aminocyclopropane-1-carboxylate deaminase, indolepyruvate decarboxylase, putative acid phosphatase and siderophore biosynthesis protein were identified. The genomic analyses could not identify any operon related to the antimicrobial peptide bacteriocin (thuricin or nisin).

Nucleotide sequence accession numbers. The sequence of the *B. thuringiensis* strain S1785 has been deposited in GenBank with the accession number SAMN12211138.

Acknowledgment

We would like to thank Dr. Lilian Praça for the technical assistance.
