

X Encontro da SBPMat

Gramado - RS

25 to 29 | september

2011

Conference Details and Registration

All attendees are encouraged to visit the conference website <http://www.sbpmat.org.br/x-meeting> for further and updated information such as registration, submission of abstracts, important links for traveling (visas, travel agencies) and hotel reservation.

Symposia

- A) Magnetic and Superconducting Materials
- B) Biodegradable Polymer Materials
- C) Electronic Materials
- D) Surface Engineering: Fabrication, Characterization, Properties and Applications of Protective Coatings and Modified Surfaces
- E) Materials with Negative Properties
- F) Nanostructured Functional Materials for Advanced Energy and Environmental Applications
- G) Molecular Modeling Materials Science
- H) Structure-property Relationship of Advanced Metallic Materials
- I) Sol-gel Route to Prepare New Inorganic, Hybrid and Multifunctional Materials
- J) Solidification of Metals and Alloys
- K) Supramolecular Organic Materials for Electronic, Photonics and Nanotechnology
- L) Structure-Property Relationship of Ceramic Materials: Theoretical and Experimental Aspects
- M) Advances and Applications of Electron Microscopy
- N) Prospects for Materials Science with Synchrotron Radiation in Brazil
- O) 1st Brazilian Symposium in Friction Stir Welding and Processing Graphene

Official Travel Agency: Liga Turismo

agency provides excellent hosting, airline tickets (20% discount), mado-PoA airport shuttle options and sightseeing suggestions.

Turismo also provides travel-hosting-tour combo options! Get in tact!

Phone: +55 51 3085-4466 or +55 54 3286-4048

E-mail: reservas@ligaturismo.com.br

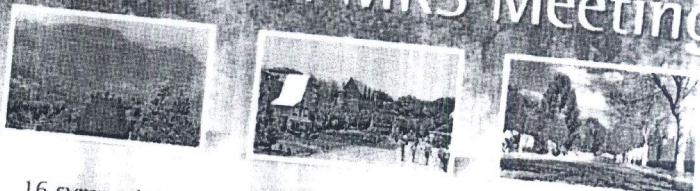

X Brazilian
MRS Meeting

SBPMat
Brazil-MRS

Brazilian Mater
Research Socie

X Brazilian MRS Meeting

16 symposia with oral, poster and invited lecture presentations

Plenary lectures

Exhibits

Celebration of 10 years of Brazilian MRS

National Committee

- Aldo Felix Craievich (USP-SP)
- Alcio Nelmo Klein (UFSC)
- Antonio Carlos Hernandez (USP-SC)
- Carlos Frederico de Oliveira Graeff (Unesp)
- Carlos Mauricio Lepienski (UFPR)
- Dulce Maria de Araujo Melo (UFRN)
- Edgar Dutra Zanotto (UFSCar)
- Elisa Maria Baggio Saitovitch (CBPF)
- Elson Longo (Unesp)
- Fernando Cláudio Zawislak (UFRGS)
- Fernando Lazaro Freire Junior (PUC-RJ)
- Iêda Maria Garcia dos Santos (UFPB)
- Ivan Guillermo Solorzano (PUC-RJ)
- Jesiel Freitas Carvalho (UFG)
- José Alberto Giacometti (Unesp)
- José Antônio Eiras (UFSCar)
- José Arana Varela (Unesp)
- Julio Ricardo Sambrano (Unesp)
- Margareth Spangler (CETEC-MG)
- Raul José da Silva C. M. da Fonseca (UERJ)
- Renato de Figueiredo Jardim (USP-SP)
- Roberto Mendonça Faria (USP-SC)
- Sergio de Souza Camargo Junior (UFRJ)
- Waldemar Augusto A. Macedo (CDTN)
- Walter Jose Botta Filho (UFSCar)

Local Committee

- Adriana Pohlmann (UFRGS)
- César Petzhold (UFRGS)
- Cristiano Krug (UFRGS)
- Daniel L. Baptista (UFRGS)
- Eduardo Ceretta Moreira (Unipampa)
- Fábio Teixeira Dias (UFPEL)
- Gustavo M. de Azevedo (UFRGS)
- Luiz F. Scheff (UFSM)
- Márcia R. Galas (UFRGS)
- Naira M. Balzaretti (UFRGS)
- Paulo F. P. Fichtner (UFRGS)
- Ricardo M. Papaleo (PUC-RS)

10 years of excellence in
the congregation of science,
and research in materials
technology in Brazil

A NanocARRIER Charge Model for the Transport in Poly(*o*-alkoxyanilines)

F. L. Leite^{1*}, M. L. Simões², M. Oliveira Neto⁵, P. A. P. Nascente³, C. J. L. Constantino⁴, L. H. C. Mattoso⁵, O. N. Oliveira Jr⁶.

The mechanisms for charge transport and the nature of the charge species have been controversial. Here we propose a structural model for poly(*o*-alkoxyanilines), where the conduction process is governed by nanocarriers or *quasi*-particles with concomitant hopping and tunneling between conducting islands. The metallic islands are coupled into the network with the twisted and tangled polymer chains. We studied the formation of *charge carriers* in poly(*o*-alkoxyanilines) using electron paramagnetic resonance (EPR), which shows the presence of two types of *charge carriers* in poly(*o*-alkoxyaniline) solutions for an intermediate pH value (pH=5.0). The first type is localized in the amorphous part and with small mobility, while the second is delocalized in the semi-crystalline part with high mobility. Using small-angle X-ray scattering (SAXS) we confirm the existence of *quasi*-particles in solution, corroborated by *ab initio* procedures based on simulated annealing. The model also indicates that the *quasi*-particles may jump between defects along the polymer chain providing electronic conduction, which are consistent with molecular modeling results (*ab initio* and semi-empirical). However, it does not discard the hopping process between neighboring chains.

Keywords: Nanocarriers, AFM, Polyaniline, EPR, XPS and SAXS.
